BANDPLAN

a) Introduction

With a 3-year experience the actual HF bandplan (decided in San Marino 2002) does neither fulfill the needs of the users nor is respected by them. The definition by band-width is not well-trying because mainly on 10, 14 and 21 MHz the recommendations of IARU Region are often not respected.

b) Background

After the experience of USKA a new HF band plan should again be defined by modes, together with protected frequencies (e.g. emergency, IBP, DX, IOTA).

c) Key points and proposals

USKA will furnish later but in time a proposal of a new HF bandplan.

d) Recommendations

USKA recommends that the Final plenary endorses:

either

- ❖ the HF-new bandplan (as discussed and passed in the HF-committee) is approved and recommended to the MS for use from 1. January 2006 on

or (if not passed in the HF-committee)

- ❖ the set up an operational working group within the HF-committee which has to establish a new proposal until the General Conference in 2008
